Career Objective

Obtaining a challenging position in a reputed organization where I can utilize my subject knowledge, technical skills for the success of the company and myself as a responsible Software Engineer.

Experience – [Feb 2021 - Present]

Pintube:

Pintube: This is an online platform for job seekers and job providers. This provides users to get in touch with the desired job they want and also if the user wants any kind of service they can find suitable service provider from this app. I worked in this project in team. My role and responsibility in this project is to create this project from scratch in react native, build user friendly responsive UI, Analysis and mind map for the design, Integrate APIs using global state management (redux, redux saga and redux toolkit) and third party library integration

Names app: This app is for the domain name. This app let user know the information about any domain they want to know about. The basic information this provide is availability, price, owner, origin, etc. User can also purchase the domain and bid for the domain. My role and responsibility in this project was to create this project from scratch in react native, build user friendly responsive UI, API integration, global state management (redux, redux thunk and redux toolkit) and third party library integration.

Freelancer:

Electro Invoice: This is an invoice generating app for a personal business. This app let user create invoice according to the items and their price for electric items. I have worked stand alone in this project created project from scratch. I used react native in this project also created responsive UI and used redux for global state management.

Device SysInfo: This app is for checking device information. I have worked in team for this project. This app is created using react-native. My role in this app was to create responsive UI and resolving the bug.

Short Notes: This app is for taking short notes. User can also save their note in their account or can also use offline. I worked in them for this react native project. My role and responsibility in this project was to create responsive UI and API call for getting notes and save notes to server.

Weather App: This app is for weather forecasting. This app provides current location weather as well as any city or locations weather. This app will also show user the further day's weather. I created this app in react native. I created Responsive UI, used redux, axios(API call), and third party libraries like react-native-geolocation.

Leo: This is a social media app. This app focuses on audio rather than text. User can upload post and with that they need to upload audio. User can comment on the post in only audio. I worked in team of 3 developers. My role and responsibility was to develop responsive UI, Integrate APIs, and Integrate third party library and push notification.
